

PROFILE

I am a front-end developer with a strong background in HTML, CSS, and JavaScript. I have extensive experience working with modern frameworks like Angular, React, and Next.js to build dynamic and responsive web applications. I excel in UI development, creating visually appealing and user-friendly interfaces. Additionally, I have experience working with Supabase and have set up Keycloak for authentication and authorization solutions. I'm passionate about crafting intuitive user experiences and continuously improving my skills in the latest front-end technologies.

WORK EXPERIENCE

Sumeru Software Solutions

MAY 2023 - PRESENT

Junior Developer

- Designed and implemented reusable, highly efficient components to streamline workflows and reduce development effort across multiple projects.
- Successfully managed and delivered a single module, named "Segmentation," requiring recursive modals to dynamically render components based on user inputs, ensuring seamless functionality.
- Led the implementation of Keycloak for authentication and authorization, creating a custom theme using Keycloakify tailored to React as the primary framework across the project.
- Guided some of interns on various modules, ensuring timely delivery while maintaining code quality and best practices.
- Contributed to two highly complex administrative projects, effectively managing workflows and UI designs derived from 600-700 Figma screens.
- Proactively designed and built a library of common components from scratch, accelerating product development and maintaining consistency across projects.
- Worked closely with Business Analysts to identify edge cases, optimize user flows, and ensure the delivery of high-quality, user-friendly products.
- Contributed to the Payment Gateways team by integrating Caps-UI and enhancing the associated npm package, ensuring robust and scalable solutions for global payment preferences.

Alore Growth OS

NOV 2021 - MAY 2023

Frontend Engineer

- Designed and Developed components in Angular to be used across multiple products.
- Created CSS library from scratch for the company.
- Designed and Developed whole gmail structure with api implementation on On-going product
- Regular discussions with backend team regarding optimization of API deployments
- Develop website features that can enhance the user experience.
- Performed coding, debugging tasks in support of projects.
- Created flow-charts for different work-flows.
- Mentoring juniors to guide them with all of their queries.
